

Full Stack Web Developer

What if you were given the opportunity and responsibility to make a difference?

Our mission is to empower the community through easy and personalized access to volunteerism, and drive people from intention to action.

The Volunteer Circle is a non-profit social enterprise and a bold step towards personalizing the volunteer experience in the MENA region and internationally. We provide an AI-powered and inclusive platform that unlocks access to volunteerism by matching the supply of time/skills of volunteers to the community needs on-demand and predicts effective matches between both parties.

Our circle is a vision about channeling underutilized time and talent towards impact on the personal level and improving the capacity of non-profit organizations on the national level.

Join the Volunteer Circle team to experience the pace of a start-up and contribute to social impact simultaneously. We're innovative, real, and committed to growing an in-house product and software development team.

On this journey, you will also be supported by a senior team of software development experts and consultants.

This position suits you if you

- You like working in a dynamic, agile environment where you can shape the product.
- You want to experience the culture of a startup with no complex processes and procedures.
- You are a fan of web, technology, and develop your skills as per the latest trends.
- You would like to contribute to distributed SaaS system.
- You are the type of a person who wants not only have your ideas heard but see them put into action.

Role Description

The Volunteer Circle provides a smart skill-matching platform for everyone to be able to have accessible and personalized volunteering experience. One of our main revenue streams is based on extending the product as a private platform that can be plugged and played into governments, corporate companies, and academic institutions or wherever in the world there is a natural disaster or humanitarian emergency. Your role will be to develop and advance our tech solution both on the Web and on Mobile APP. In line with our vision for inclusivity, your role will be to ensure high-end performance of the tech-based product as well as ensure access of the product to differently-abled groups.

What you will do:

- Develop user interfaces using Photoshop, XD and Sketch Files
- Develop and enhance a smarter version of our platform using content recommendation systems
- Participate in a full life-cycle of the product
- Conduct unit tests to ensure high-end performance
- Work with passionate people and develop new features
- Design and implement a lean database design to be able to generate automatic reports in real-time and drive data-driven decision making
- Document code
- Work with technologies like AWS

Candidate specifications:

- Experience in writing Java and Java Script
- Experience in one or two front-end languages such as Angular, React, Laravel
- Experience in writing Node js, PHP, or other
- Experience in releasing at least one or two projects
- Knowledge of AWS technologies
- Excellent verbal communication and written skills in English
- Fluent in written and spoken Arabic
- Demonstrates a sense of purpose
- Attention to detail, commitment to deadlines and a humble attitude
- Proactive in suggesting points of focus or opportunities for growth
